The Swedish Radiation Safety Authority (www.ssm.se) has together with the County Administrative Boards (www.lansstyrelserna.se/1st/en/) produced a brochure with information and tips on how to design the outdoor environment to protect children from overexposure to UV-radiation. The brochure is a part of the process to achieve a safe radiation environment and it is meant to be a support for local authorities and others who are planning school grounds, preschool playgrounds and parks. The brochure and its content will be presented.
